# ARTEM KUZMENKO

Hi there! I'm a backend (PHP and Laravel) developer. Additionally, I have good knowledge of frontend technologies. I'm always eager to learn new things and integrate them into my work. I'm passionate about creating clean, pure, and understandable code and architecture.
Looking forward to connecting with you!

Experience

Full Stack Developer at Celfocus - Lisbon, Portugal (remote)
Februrary 2022 - May 2023
www.celfocus.com

Management and accounting system for equipment and networks for Vodafone Ziggo
Main technologies: PHP, Microsoft SQL Server, Javascript

I was an integral part of the developing team of a bespoke project for Vodafone Ziggo,
a leading B2B telecommunications company in the Netherlands.

Some of key features in the project were:
inventory management, order processing, equipment provisioning, network monitoring,
equipment fault detection and resolution, billing and invoicing, network configuration management,
system security, and more.

My responsibilities encompassed the following key areas:
• Took part in crafting PHP 8-based back-end solutions, emphasizing solid and pure
  programming practices, given the project's vast and highly complex nature.
• Took on the challenge of enhancing legacy code for improved efficiency and maintainability.
  Successfully migrated the codebase from PHP 5 to PHP 8, ensuring compliance with modern standards.
• Designed responsive and user-friendly front-end interfaces
• Participated in DevOps processes like CI, CD, etc
• Participated in writing documentation for various parts of the project

Backend developer - internal ERP and CRM system
Jule 2021 - December 2021

Multitenant ERP and CRM system for Warehouse Management
Main technologies: PHP, Laravel, React, GraphQl, Docker

I spearheaded the development of the application architecture from the ground up.
I actively contributed to the implementation of all key features,
including goods management (prices, costs, taxes, location), goods postings and write-offs,
client order processing, goods stocktaking, and company financials (incomes and outcomes).

In addition to hands-on coding, I played a pivotal role in conceptualizing and optimizing functional workflows.

Fullstack developer at Yaraku, inc - Tokyo, Japan (office and remote)
June 2019 - June 2021
www.yarakuzen.com

Multitenant app for professional translators.
Main technologies: PHP, Laravel, React, Typescript, Elasticsearch, Docker

I was in charge of building new and improving existing app features such like:
• Developing an external API to cater to diverse clients.
• Building the infrastructure for seamless line-by-line translation on both the front and back end.
• Designing an API capable of translating different file types (from XML to PPTX) using
  both external and internal translation engines.
• Implementing user dictionaries and history functionalities, utilizing Elasticsearch to enhance the translation process.

Fullstack developer at Magnus Digital - Ljubljana, Slovenia (remote)
Jule 2018 - April 2019

Multitenant app for lawyers.
Main technologies: PHP, Laravel, Vue.js, AWS services

Initially, my role involved transforming the monolithic Laravel application into a client-server architecture.
Subsequently, I undertook the responsibility of developing new features, including:
  • Implementing a versioned file manager with data encryption, comments, and private/public access features.
  • Establishing data synchronization with AWS S3 bucket for seamless file management.
  • Leveraging AWS SQS for efficient handling of SMS, email, and other website notifications.
  • Creating a robust search and parsing functionality for the law database data.
  • Developing a comprehensive court case history module.
  • Designing a calendar tailored to meet the specific needs of lawyers.

Fullstack developer at inSeegment, inc - Boston, Massachusetts (remote)
April 2016 - May 2018
www.insegment.com

Main technologies: PHP, Laravel, Symfony components, ElasticSearch, Vue.js, Javascript, Bootstrap

I played a key role in the development of three distinct applications
interconnected by APIs and Single Sign-On (SSO) authentication, catering to internal marketing
and market analysis needs.
Some of the features I actively contributed to include:
  • Implementation of Single Sign-On (SSO) authentication for seamless user access across the connected applications.
  • Parsing and processing data from various stock exchanges such as NYSE and NASDAQ.
  • Managing and analyzing user activity data to derive meaningful insights.
  • Developing an automated notification system to alert company specialists about pertinent market changes in real-time

Teacher for beginners at IMT Academy - Dnipro, Ukraine
February 2014 - September 2015
www.imt.academy

My job was to teach beginners how to develop professional websites using PHP, JavaScript,
HTML/CSS, and WordPress.

Freelance
June 2012 - April 2016

I've developed a variety of websites, including promotional sites, e-stores, catalogs,
and small to mid-sized management sites,
using WordPress, PHP, JS, Bootstrap, jQuery, and Laravel.

Internship website developer at First Ukrainian Studio - Dnipro, Ukraine
May 2011 - Jule 2011
www.webstudio.biz

As an intern developer, I assisted senior developers in constructing diverse websites
using various CMS platforms such as WordPress and Joomla.
My primary responsibility involved translating PSD designs into fully functional websites.

EDUCATION

Computer engineering - bachelor degree	2014 - 2019	**International computer academy ITSTEP**	2011 - 2017
